ASIA_V 419 - Economic History of India

Sebastian Prange

This course examines the material foundations of South Asian history. Today, India is the fifth-largest economy in the world by total GDP, and one of the countries with the fastest rate of economic growth. While this growth has been accompanied by a substantial reduction in poverty rates, it is estimated that more than half of India's population — some 900 million people — continue to live below or near the poverty line. This course uses the lens and the tools of economic history to ask how this extreme contrast has come into being, and how it has come to persist.

The course invites you to think big: to seek out broad patterns and identify connections that extend across space and through time. We will explore more than a millennium of South Asian history, all the while taking into account transnational developments and the shifting place of the Indian subcontinent in the world economy.

Mode of Delivery: Online
